ENERGY POLICY STATEMENT – July 2026

PMS International Group PLC

Our ISO 50001:2018 Energy Management System continues to provide the framework for continuous improvement and underpins our commitment to energy efficiency, reducing energy consumption, and minimising our environmental impacts.

Our mission will continue to be as sustainable as possible and protect the planet by annually measuring and minimising our emissions. As a leading global import and export business we treat energy and climate change, energy efficiency and reducing energy use as central to our culture and values. An important commitment within our policy is saving energy and carbon and aspiring to become a Net Zero business. We will continue to lead by example, operating and reviewing both our UK and global operations.

Our commitment to reducing carbon emissions from our properties, transport and operations has been measured and we have a continual improvement plan which is underpinned by our ISO methodology to PLAN – DO – CHECK – ACT. We annually report our performance against a baseline period and show a reduction and commitment to further drive the UK carbon agenda in everything that we do.

We will continue to report across scopes 1, 2 and 3 under the GHG Protocol for emissions reporting as standard as detailed in our ISO management processes and procedures annually.

We will continue to comply with all applicable legal requirements which relate to energy aspects, audit our significant energy users, and contribute to the UK's ambition to achieve Net Zero Emissions and, so far as practicable, adopt accepted best practice in energy management. Our business vehicles have already moved to electric/hybrid, and we will continue to consider any financially viable options for fleet on a case-by-case basis.

Our significant investment into projects over the past 5 years has not only provided us with a return on investment, improved employee working conditions but also materially changed our ethos in relation to managing and reducing energy and carbon emissions.

This Policy is supported and championed by:

Our Managing Director/CEO – David Topple Signed:

Our ISO Systems Administrator – Dawn Cowcher Signed: Dawn Cowcher

Date of next review – 1st June 2027
